### General Notes

**All earth shoulders, cut, and fill slopes shall be plain or mulch seeded.**

The final cross sections of the grading contract will be the original cross sections of the theoretical cross sections by using treatment of existing fills, treatment by removal, or theoretical cross sections by using treatment of existing fills.

The quantity of peat excavation shown on the plans has been estimated on the basis of theoretical cross sections.

**All earth shoulders, cut, and fill slopes shall be plain or mulch seeded.**

The quantity of peat excavation shown on the plans has been estimated on the basis of theoretical cross sections.

The final cross sections of the grading contract will be the original cross sections of the theoretical cross sections by using treatment of existing fills, treatment by removal, or theoretical cross sections by using treatment of existing fills.

The quantity of peat excavation shown on the plans has been estimated on the basis of theoretical cross sections.

The final cross sections of the grading contract will be the original cross sections of the theoretical cross sections by using treatment of existing fills, treatment by removal, or theoretical cross sections by using treatment of existing fills.

The quantity of peat excavation shown on the plans has been estimated on the basis of theoretical cross sections.

The final cross sections of the grading contract will be the original cross sections of the theoretical cross sections by using treatment of existing fills, treatment by removal, or theoretical cross sections by using treatment of existing fills.

The quantity of peat excavation shown on the plans has been estimated on the basis of theoretical cross sections.

The final cross sections of the grading contract will be the original cross sections of the theoretical cross sections by using treatment of existing fills, treatment by removal, or theoretical cross sections by using treatment of existing fills.

The quantity of peat excavation shown on the plans has been estimated on the basis of theoretical cross sections.

The final cross sections of the grading contract will be the original cross sections of the theoretical cross sections by using treatment of existing fills, treatment by removal, or theoretical cross sections by using treatment of existing fills.

The quantity of peat excavation shown on the plans has been estimated on the basis of theoretical cross sections.

The final cross sections of the grading contract will be the original cross sections of the theoretical cross sections by using treatment of existing fills, treatment by removal, or theoretical cross sections by using treatment of existing fills.

The quantity of peat excavation shown on the plans has been estimated on the basis of theoretical cross sections.

The final cross sections of the grading contract will be the original cross sections of the theoretical cross sections by using treatment of existing fills, treatment by removal, or theoretical cross sections by using treatment of existing fills.

The quantity of peat excavation shown on the plans has been estimated on the basis of theoretical cross sections.

The final cross sections of the grading contract will be the original cross sections of the theoretical cross sections by using treatment of existing fills, treatment by removal, or theoretical cross sections by using treatment of existing fills.

The quantity of peat excavation shown on the plans has been estimated on the basis of theoretical cross sections.

The final cross sections of the grading contract will be the original cross sections of the theoretical cross sections by using treatment of existing fills, treatment by removal, or theoretical cross sections by using treatment of existing fills.

The quantity of peat excavation shown on the plans has been estimated on the basis of theoretical cross sections.

The final cross sections of the grading contract will be the original cross sections of the theoretical cross sections by using treatment of existing fills, treatment by removal, or theoretical cross sections by using treatment of existing fills.

The quantity of peat excavation shown on the plans has been estimated on the basis of theoretical cross sections.

The final cross sections of the grading contract will be the original cross sections of the theoretical cross sections by using treatment of existing fills, treatment by removal, or theoretical cross sections by using treatment of existing fills.

The quantity of peat excavation shown on the plans has been estimated on the basis of theoretical cross sections.

The final cross sections of the grading contract will be the original cross sections of the theoretical cross sections by using treatment of existing fills, treatment by removal, or theoretical cross sections by using treatment of existing fills.

The quantity of peat excavation shown on the plans has been estimated on the basis of theoretical cross sections.

The final cross sections of the grading contract will be the original cross sections of the theoretical cross sections by using treatment of existing fills, treatment by removal, or theoretical cross sections by using treatment of existing fills.

The quantity of peat excavation shown on the plans has been estimated on the basis of theoretical cross sections.

The final cross sections of the grading contract will be the original cross sections of the theoretical cross sections by using treatment of existing fills, treatment by removal, or theoretical cross sections by using treatment of existing fills.

The quantity of peat excavation shown on the plans has been estimated on the basis of theoretical cross sections.

The final cross sections of the grading contract will be the original cross sections of the theoretical cross sections by using treatment of existing fills, treatment by removal, or theoretical cross sections by using treatment of existing fills.

The quantity of peat excavation shown on the plans has been estimated on the basis of theoretical cross sections.

The final cross sections of the grading contract will be the original cross sections of the theoretical cross sections by using treatment of existing fills, treatment by removal, or theoretical cross sections by using treatment of existing fills.

The quantity of peat excavation shown on the plans has been estimated on the basis of theoretical cross sections.

The final cross sections of the grading contract will be the original cross sections of the theoretical cross sections by using treatment of existing fills, treatment by removal, or theoretical cross sections by using treatment of existing fills.

The quantity of peat excavation shown on the plans has been estimated on the basis of theoretical cross sections.

The final cross sections of the grading contract will be the original cross sections of the theoretical cross sections by using treatment of existing fills, treatment by removal, or theoretical cross sections by using treatment of existing fills.

The quantity of peat excavation shown on the plans has been estimated on the basis of theoretical cross sections.

The final cross sections of the grading contract will be the original cross sections of the theoretical cross sections by using treatment of existing fills, treatment by removal, or theoretical cross sections by using treatment of existing fills.

The quantity of peat excavation shown on the plans has been estimated on the basis of theoretical cross sections.

The final cross sections of the grading contract will be the original cross sections of the theoretical cross sections by using treatment of existing fills, treatment by removal, or theoretical cross sections by using treatment of existing fills.

The quantity of peat excavation shown on the plans has been estimated on the basis of theoretical cross sections.

The final cross sections of the grading contract will be the original cross sections of the theoretical cross sections by using treatment of existing fills, treatment by removal, or theoretical cross sections by using treatment of existing fills.

The quantity of peat excavation shown on the plans has been estimated on the basis of theoretical cross sections.
